MERCHANT APP

UX & UI Design, Iconography, Research

The Merchant App is designed with first-time smartphone users in mind, merchants who are typically cash-only - receipts, and ledgers often handwritten.

The goal was function and usability over form.

WIREFRAMES & NAVIGATION MAP

When collecting feedback on the existing app, we found the lack of a clear sense of navigation would at times paralyze the user, we wanted to build a UI which ensured an intuitive experience.

Most of the navigation and layout decisions were made during whiteboard sessions with the product team, and at times, key stakeholders. We iterated these until the final design stage. Low fidelity mockups were created to illustrate the core screens, and unified checkout process.

The unified checkout was the foundation of our new navigation flow, we split the core use cases into ‘Till’ (custom payment), ‘Products’ (regular payments), and ‘Services’ (utility and wallet related transactions). We then designed a checkout process that was consistent between all 3 payment categories.
